

Aspirus now offering the choice of 3D Mammography

State of the Art Technology

Benefits of 3D Mammography

- 3D has a 41% **increase** in the detection of invasive breast cancers over 2D.
- 20% - 40% **decrease** in women being recalled for additional imaging.
- All women benefit from this technology but it is especially helpful for dense breast tissue.
- The procedure is very similar to a traditional 2D mammogram and involves a low dose of radiation.

Things to consider prior to scheduling

- Aspirus offers both traditional 2D and 3D mammography
- 2D is cost conscious and still an acceptable screening tool. 2D is typically covered by your insurance plan
- 3D is clinically superior technology covered by Medicare but typically not covered by most insurance plans. To aid in your decision please contact your insurance company prior to arrival. To inquire you will need these 3D CPT codes: Screening Mammogram: 77067 & 77063 and Diagnostic Mammogram: 77066 & G0279
- The estimated out of pocket cost for 3D is \$100 at Aspirus Medford Hospital

We are here to help! If you have any questions or need assistance with scheduling an appointment, please contact: 715.748.8100.
