

Future Lab Release

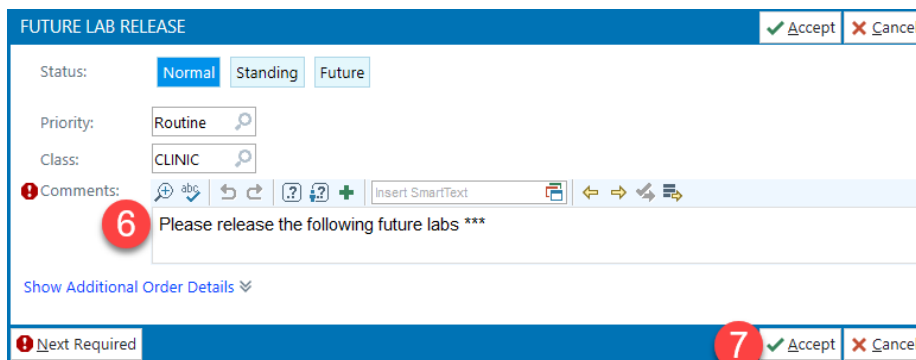

You enter future labs, and when you see the patient for a follow up you enter more labs. When there are future and today labs that need to be drawn at the same time a future lab release order needs to be placed. The order will alert the lab tech that there are additional orders that need to be drawn.

Try It Out

1. From the Visit Taskbar, click **Add Order**.
2. Type **Future**.
3. Single click to select **Future Lab Release**.
4. Click **Accept**.

5. Click the **order** to open the Order Composer.
6. In the comments section, there is text inserted with an unresolved variable (***) requiring you to indicate which open labs you want the lab to draw.
7. After typing in the labs to be released, click **Accept**.

8. Click **Sign Orders**.
9. The order(s) will appear in the lab tech's In Basket and they will know to go and release the open orders for this patient.
