

21st Century Cures Act – Information Blocking

The 21st Century Cures Act is a government regulation which requires health providers and health IT providers to allow release of patient health information, so patients have complete transparency into the cost and outcomes of their care. Aspirus will track patient requests and respond to the request within 10 days. If the requested information cannot be provided electronically through MyAspirus, Aspirus will find an alternative method to deliver the patient's requested information.

The 21st Century Cures Act allows patients to have immediate access to their lab, imaging, and pathology results, as well as ED, inpatient, and outpatient progress notes. All providers, including credentialed providers who perform services at Aspirus and the Aspirus independent practices, are affected. Any medical information that is blocked by a clinician must meet strict criteria and be documented appropriately.

Try It Out – Note Sharing

Emergency, inpatient, and outpatient notes authored by a provider are set to share with the patient by default. If there is a clinically appropriate reason for the note to not be shared with the patient, follow the steps below to prevent that note from automatically releasing to the patient.

Inpatient/Hospital Provider:

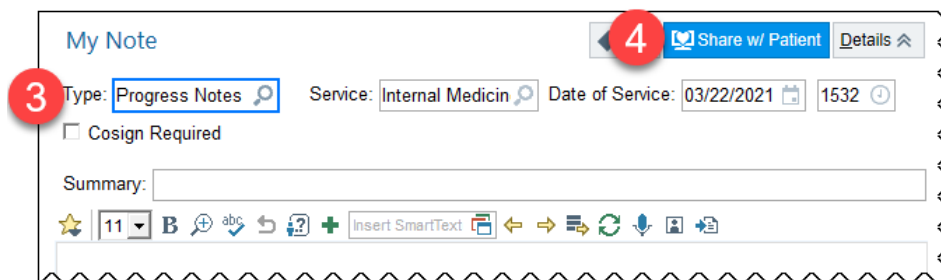

Notes authored by the following clinicians will be automatically shared with patients by default:

Physician, anesthesiologist, physician assistant, nurse practitioner, advance practice registered nurse, nurse anesthetist, resident, midwife, psychologist, podiatrist, dentist, optometrist, social worker, registered dietitian, physical therapist, occupational therapist, respiratory therapist, speech therapist, and recreation therapist.

Roles/disciplines not listed above (i.e., certified nursing assistant, registered nurse, etc.) will automatically have their signed notes blocked from being shared with the patient. The note needs to be signed so Epic can check the note author and exclude the note from being shared with the patient when applicable.

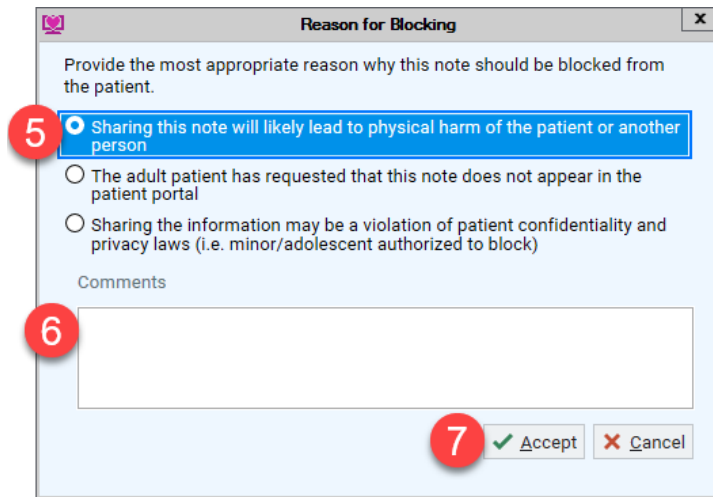

CNAs/RNs: Please leave "Share w/ Patient" defaulted as selected.

1. Click **Notes**.
2. Click **New Note**.
3. Select the note type.
4. Click **Share w/ Patient** to unselect and prevent the note from being shared to the patient.

The screenshot shows the 'My Note' form in the Epic EMR system. A red circle with the number '3' highlights the 'Type' dropdown menu, which is currently set to 'Progress Notes'. Another red circle with the number '4' highlights the 'Share w/ Patient' button, which is currently unselected (disabled). The form also shows fields for 'Service' (Internal Medicine), 'Date of Service' (03/22/2021), and 'Time of Service' (1532). There is a 'Cosign Required' checkbox and a 'Summary' text area. The bottom of the form features a rich text editor with various formatting options.

5. Address the Reason for Blocking by selecting one of the options.
6. Enter additional comments, if necessary.
7. Click **Accept**.

Reason for Blocking

Provide the most appropriate reason why this note should be blocked from the patient.

5 ☒ Sharing this note will likely lead to physical harm of the patient or another person

☐ The adult patient has requested that this note does not appear in the patient portal

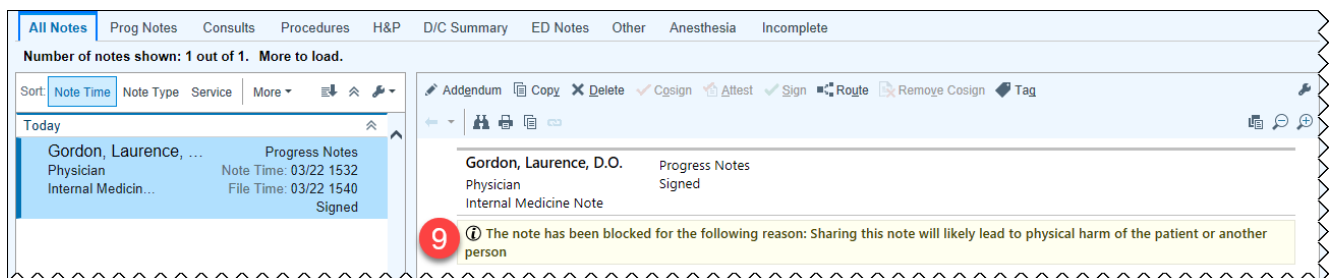

☐ Sharing the information may be a violation of patient confidentiality and privacy laws (i.e. minor/adolescent authorized to block)

Try It Out – Lab/Imaging/Pathology Ordering

Inpatient and outpatient labs, imaging, and pathology results automatically release to the patient upon the order being finalized. If there is a clinically appropriate reason for the result to not be shared with the patient, follow the steps below to prevent that result from automatically releasing to the patient. The reason for preventing immediate release is order specific.

Inpatient/Hospital and Emergency Department:

1. Search for the order.
2. From the Order Details, find **Release to patient** section within the order.
3. Click **Manual release only**.
4. Complete the **Reason for preventing immediate release**.
 - a. Type any additional comments.
5. Click **Accept**.

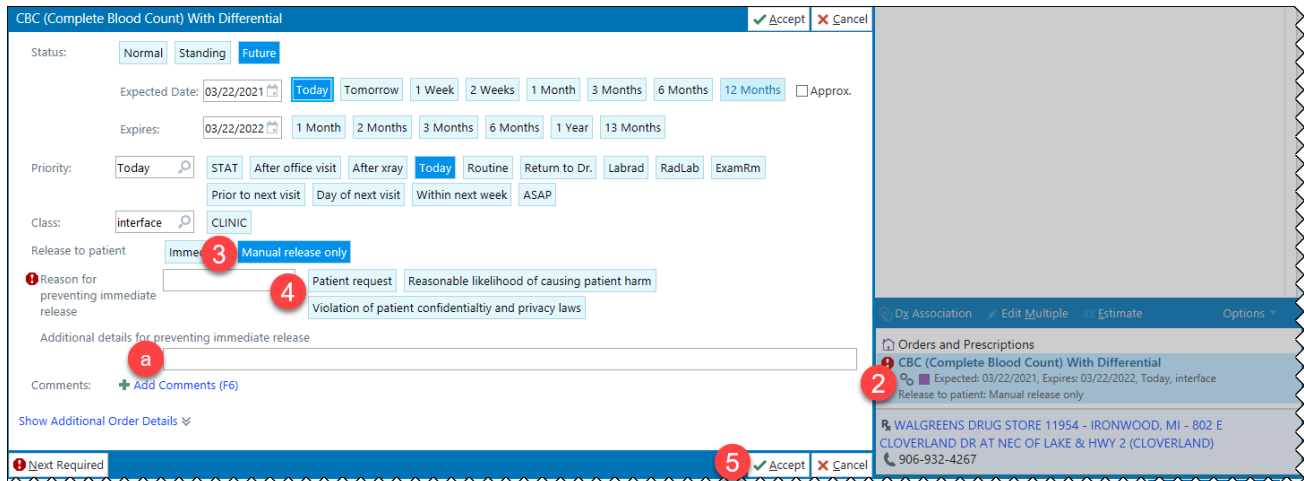

The screenshot shows the 'CBC WITH DIFFERENTIAL' order form. At the top right, there is a red circle with the number '5' next to the 'Accept' button. In the 'Release to patient' section, there is a red circle with the number '3' next to the 'Manual release only' button. Below this, in the 'Reason for preventing immediate release' section, there is a red circle with the number '4' next to the 'Patient request' button. In the 'Additional details for preventing immediate release' text area, there is a red circle with the letter 'a' next to the input field. The form includes various fields for frequency, for, starting, and reference links.

6. Associate a diagnosis with the order.
7. Click **Sign**.

Outpatient/Clinic:

1. Search for the order.
2. Click the **Order Details**.
3. Find **Release to patient** section within the order, click **Manual release only**.
4. Complete the **Reason for preventing immediate release**.
 - a. Type any additional comments.
5. Click **Accept**.

Try It Out – MyAspirus Results Release

Inpatient and outpatient labs, imaging, and pathology results automatically release to the patient upon the order being finalized unless the result is marked as manual release only upon ordering. If there is a result which has been automatically released to the patient and not viewed, you can Unrelease that result.

1. Click **Chart** or **Patient Station**.
2. Search for the patient.
3. Once in the patient's chart (non-encounter) click the **More** drop-down arrow.
4. Click **MyChart Utilities**.
5. Click **MyChart Result Release**.
